

# Beyond cannabinoids: exploration of applications for cannabis

**André Filipe Lagoa Costa**

***Mandara Labs***

**23 de Março de 2021, terça-feira, 12h – 14h**

*Within the realm of cannabis there are very distinct and wide potential applications ranging from material engineering to holistic therapies. Whole plant valorization should be the aim of any sustainable (and self-sustaining) industry, looking to extract the most value from each of the different segments of the plant, however, misinformation and counterculture notions are abundant and heavily bias grounded, serious discussion. In this presentation we will explore common misconceptions and take apart some of the idealism surrounding cannabis ranging from the industrial to the medicinal aspects.*
