

PV SYSTEMS

Floating Photovoltaics

Floating photovoltaics

FLOATVOLTAICS are PV systems supported by floating structures on body of waters

Floating photovoltaics

Benefits

Land saving

Increased Efficiency (albedo, temperature)

Reduced Evaporation of water

Less dust effect

Impacts

Increased costs (anchoring, O&M)

Degradation (corrosion, soiling)

Environmental and socioeconomic impacts

Can be
positive!!

Floating photovoltaics

Choosing the site...

- Close to load and to the grid
- High solar irradiation and low wind (no freezing water)
- Preferrably fresh water
- No competition with recreational uses
- Avoid natural habitat of preserved species

Floating photovoltaics

Floating photovoltaics

Relevant decrease in operating temperature >>> increased efficiency

Floating photovoltaics

Dropping from seabirds
may be a O&M challenge

Floating photovoltaics

In summary

- Floating PV is an emerging market with **high growth potential**
- Increased system costs may be justified by **higher generation** and **land savings**
- Very convenient synergy with **hydropower** generation
- **Environmental impacts** are site specific
- **Lifetime** to be tested
