

Física da Matéria Condensada

Margarida Telo da Gama

$\psi = \text{Tr}_B(|\psi\rangle\langle\psi|)$
 $C = \frac{1}{2\pi} \int \int \mathcal{F}(k) \cdot d^2k$
 $\theta = \gamma \mathcal{L}[\rho]$
 $\mathcal{H}_{\text{eff}} = \Delta_{\text{eff}} \psi^\dagger \sigma_x \psi \sigma_y \psi$
 $\rho(k, \omega) = \frac{1}{\omega^2(k, \omega) - \epsilon(k, \omega)}$

1

Do you know, I always thought unicorns were fabulous monsters, too? I never saw one alive before!

Well, now that we have seen each other, said the unicorn, 'if you'll believe in me, I'll believe in you.

Is that a bargain?

Lewis Carroll, Through the looking glass

NEWTON'S LAWS SPECIAL RELATIVITY QUANTUM MECHANICS SAND
 GENERAL RELATIVITY

6

7

What is condensed matter ?

Collective properties that emerge from the interactions of many particles:

- Quantum or classical Dynamics to calculate the energy spectrum (states) - E_n
- Statistical Mechanics to calculate the occupation probability of each state - $P(E_n)$

8

What is condensed matter physics ?

Properties of materials in terms of the interacting building blocks:

- Hard condensed matter: electrons & nuclei
- Soft condensed matter: polymers, colloids ...

Response to external fields:

- Linear
- Non-linear

9

10

Geometry of crystals

$\log_c\left(\frac{a}{b}\right) = \log_c a - \log_c b$
 $\sum_{k=1}^n k = \frac{1}{2}n(n+1)$
 $\log_a 1 = 0$
 $\frac{100 \times 10^{-2}}{\sqrt{100} \cdot \sqrt{2}} = \frac{8}{x+5}$
 $\frac{16}{x^2+8x+6}$

$f(-x) = a(-x) + b = -(ax - b)$
 $(x+y)^n = \sum_{k=0}^n \binom{n}{k} x^{n-k} y^k$
 $3^0 = 1$
 $\frac{b}{x+2} - \frac{8}{x+5} = \frac{16}{x^2+8x+6}$

$a^b a^c = a^{b+c}$
 $\sin^2 y + \cos^2 y = 1$
 $y = \frac{1}{2}x$
 $\sqrt{y} = \sqrt{\frac{1}{2}x}$
 $(a-b-c)^2 = a^2 + b^2 + c^2 - 2ab + 2bc - 2ca$
 $y = \sin x$
 $y = ax^2 + bx + c$
 $A = \frac{1}{2}ar + \frac{1}{2}br + \frac{1}{2}cr$
 $\frac{2}{3} = \frac{3}{2}$
 $\frac{3}{2} = \frac{2}{3}$
 $\frac{1}{2} = \frac{3}{2}$
 $\frac{3}{2} = \frac{2}{3}$

$2lh + 2wh$
 $\frac{1}{2} \cdot \frac{1}{2} \cdot \frac{1}{2} = \frac{1}{8}$
 $\frac{1}{2} \cdot \frac{1}{2} \cdot \frac{1}{2} = \frac{1}{8}$
 $\frac{1}{2} \cdot \frac{1}{2} \cdot \frac{1}{2} = \frac{1}{8}$

11

Ideal solid

Periodic structure where the atoms are placed regularly with the medium exhibiting symmetry of translation.

Mathematically, there is symmetry of translation, in 3d, when there are, 3 no coplanar, vectors such that the medium is invariant for a translation

$$T = n_1 \mathbf{a} + n_2 \mathbf{b} + n_3 \mathbf{c}$$

for all integers n_i

23

24

Crystals do not have 5-fold rotational axes

25

Exercise

Show that there are no lattices with 5-fold or n -fold axes with $n > 6$

26

Lattice proof

27

Geometric proof

28

Rigid symmetries are not independent

For example, a 2-fold axis perpendicular to a mirror plane implies inversion symmetry (prove this).

Small number of symmetry groups in 2 and 3 dimensions.

Point symmetry groups: Crystallographic systems

Spatial symmetry groups: Bravais lattices

29

40

41

42

Reciprocal lattice

$G = 1b_1 + 0b_2$

$G = 1b_1 + 1b_2$

$G = 1b_1 + 0b_2$

$G = 3b_1 - 2b_2$

$I = e^{iG \cdot r}$

43

Reciprocal lattice vectors

$$\vec{b}_1 = 2\pi \cdot \frac{\vec{a}_2 \times \vec{a}_3}{V}$$

$$\vec{b}_2 = 2\pi \cdot \frac{\vec{a}_3 \times \vec{a}_1}{V}$$

$$\vec{b}_3 = 2\pi \cdot \frac{\vec{a}_1 \times \vec{a}_2}{V}$$

- As we have seen above, the reciprocal lattice of a Bravais lattice is again a Bravais lattice.
- The reciprocal lattice of a reciprocal lattice is the original direct lattice.
- The length of the reciprocal lattice vector is proportional to the reciprocal of the length of the direct lattice vector. This is where the term reciprocal lattice arises from.

44

Reciprocal lattice of an fcc lattice

direct lattice
fcc with edge length a

reciprocal lattice
bcc with edge length $\frac{a}{2}$

$$\vec{b}_1 = \frac{8\pi}{a^3} \vec{a}_2 \times \vec{a}_3 = \frac{4\pi}{a} \left(\frac{\hat{x}}{2} + \frac{\hat{y}}{2} + \frac{\hat{z}}{2} \right)$$

$$\vec{b}_2 = \frac{8\pi}{a^3} \vec{a}_3 \times \vec{a}_1 = \frac{4\pi}{a} \left(\frac{\hat{x}}{2} + \frac{\hat{y}}{2} + \frac{\hat{z}}{2} \right)$$

$$\vec{b}_3 = \frac{8\pi}{a^3} \vec{a}_1 \times \vec{a}_2 = \frac{4\pi}{a} \left(\frac{\hat{x}}{2} + \frac{\hat{y}}{2} + \frac{\hat{z}}{2} \right)$$

9. Termodinâmica de electrões

The diagram shows a 3D Fermi polyhedron on the left and a plot of the density of states $D(E)$ versus energy E on the right. The plot shows a blue curve representing the total density of states and a red curve representing the density of states at the Fermi level E_F .

157

Fermi level

Two energy level diagrams, (a) and (b), are shown. Diagram (a) shows a set of discrete energy levels with a dashed line indicating the Fermi level E_F between two levels. Diagram (b) shows a similar set of levels with the Fermi level E_F passing through one of the levels.

158

Density of states

Two plots of the density of states $D(E)$ versus energy E are shown. The top plot shows a sharp peak at the Fermi level E_F , while the bottom plot shows a more complex, multi-peaked structure.

159

Fermi surface of free electrons in 2d (square)

Diagrams illustrating the Fermi surface of free electrons in a 2D square lattice for different filling factors. The top row shows the Fermi surface for $\nu = 1/4$ (a small square) and $\nu = 1/2$ (a larger square). The bottom row shows the Fermi surface for $\nu = 3/4$ (a square with inward-pointing corners) and $\nu = 1$ (a square with outward-pointing corners).

160

Fermi surface of nearly free electrons in 2d (square)

Diagrams illustrating the Fermi surface of nearly free electrons in a 2D square lattice. The top row shows the Fermi surface for $\nu = 1/4$ (a small square) and $\nu = 1/2$ (a larger square). The bottom row shows the Fermi surface for $\nu = 3/4$ (a square with inward-pointing corners) and $\nu = 1$ (a square with outward-pointing corners).

161

BZ of the square lattice: electrons & holes

Diagram illustrating the Brillouin zone (BZ) of a square lattice. The BZ is shown as a square in the k_x - k_y plane. The diagram shows the positions of electrons (green dots) and holes (red dots) relative to the BZ boundaries.
